## ASi Power Supply Decoupling Unit for 1 ASi circuit

### 1 x 4 A decoupling

Applicable with masters  
without integrated data decoupling in the gateway

Supply of 1 ASi circuit via 1 standard 30 V power supply

Protection category IP20

The ASi Power Supply Decoupling Unit was developed for the use with double masters without integrated data decoupling in the master. It is used to decouple the power supply in order to power up 1 ASi circuit with 1 standard 30 V Power Supply.

The ASi Power Supply Decoupling indicates the ASi voltage at the inputs with two LEDs in two steps:

1. ASi voltage > 28 V
2. ASi voltage > 26 V

The data decoupling unit built inside the ASi Power Supply Decoupling Unit is limited to 4,0 A at 30 V for each network.

ASi Power Supply Decoupling Unit is short circuit protected.

The ASi Power Supply Decoupling Unit can also be used in combination with a repeater. It has an IP20 housing.

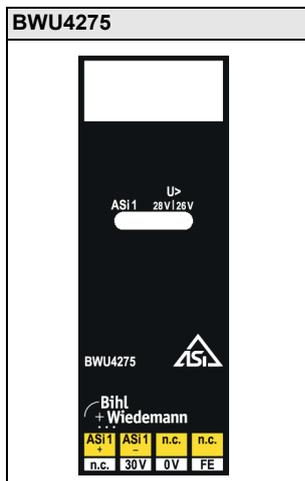

Several ASi Power Supply Decoupling Units can be supplied out of 1 power supply.

The DC line from the power supply must not be grounded!
